Abstracts

Modified bitumen adhesive is a specialized construction material primarily used for bonding modified bitumen roofing membranes, which are polymer-modified asphalt sheets designed for waterproofing flat or low-slope roofs. This adhesive, typically formulated as a cold-applied or hot-mopped bitumen-based compound, ensures strong, durable, and weather-resistant seals between membrane layers and at critical details like flashings and penetrations. Its key characteristics include high tensile strength, flexibility across temperature variations, resistance to UV degradation and water ingress, and compatibility with various substrates such as concrete, wood, or metal decks. The product is essential in commercial, industrial, and institutional roofing systems, where it contributes to long-term performance by preventing leaks, reducing thermal stress, and extending roof lifespan.

The global Modified Bitumen Adhesive market size was estimated at USD 1500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
