Abstracts

Modified cassava starch refers to native cassava starch that has been physically, chemically, or enzymatically treated to alter its properties, such as viscosity, solubility, texture, stability, or gel formation, enhancing its functionality for specific industrial and food applications. This process allows the starch to perform better under various conditions like high temperatures, acidic environments, or mechanical stress, making it a versatile ingredient in sectors including food and beverage (as a thickener, stabilizer, or binder), paper manufacturing (for improving paper strength and surface properties), textiles (as a sizing agent), pharmaceuticals (in tablet formulation), and adhesives (providing desired consistency and binding qualities). The modification broadens cassava starch's usability beyond its native form, aligning it with precise technical requirements across diverse industries.

The global Modified Cassava Starch market size was estimated at USD 1050.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
