Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modified Epoxy Acrylate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Modified epoxy acrylates are resin materials whose properties (such as flexibility and resistance to yellowing) are improved by introducing other components into epoxy acrylates through physical or chemical methods. The core raw materials are epoxy resin, acrylic acid or methacrylic acid, as well as solvents, catalysts, and polymerization inhibitors. It combines the adhesiveness and chemical resistance provided by epoxy groups with the high reactivity (rapid photocuring) of acrylate groups, and is commonly used to prepare high-hardness, chemical-resistant UV/EB curable coatings, inks, and adhesives. Global sales volume in 2024 was approximately 70,000 tons, with an average market price of approximately US\$2,300 per ton. The scale of single-line production capacity varies depending on the production process and investment scale of production equipment, typically ranging from 1,000 to 3,000 tons per year, with industry gross profit margins ranging from 15% to 30%.

The global Modified Epoxy Acrylate market size was estimated at USD 161.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
