Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modified PET competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global modified PET production reached approximately 2,583 K tons, with an average global market price of around US\$ 2,318/ton. Modified PET is a family of PET-based engineering compounds in which base PET resin is industrially compounded with functional additives and reinforcements (for example, glass fiber, mineral fillers, impact modifiers, heat-stabilizers, flame-retardants, lubricants and conductive/thermally-filled additives) to obtain improved mechanical, thermal, dimensional-stability and processing properties for technical applications. Upstream for modified PET includes PET base resin plus feedstocks such as glass fiber, talc/MC fillers, stabilizers and specialty additives. Downstream, modified PET is supplied as pellets or long-fibre/long-glass compounded profiles for automotive structural/under-the-hood parts, electrical/electronics housings and connectors, appliance/consumer heat-resistant parts, industrial pump/valve components and specialty film/packaging niches. Typical industrial compounding/extrusion lines for engineering compounds (depending on screw size, shift pattern and uptime) commonly range roughly 3,000-6,000 tons/year per line at commercial factories. Modified PET products typically have gross margins of 10% to 25%.

The global Modified PET market size was estimated at USD 5986.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
