Report Overview

Automobile lights lenses generally use optical grade PMMA, optical grade PC and other materials. The advantages of optical grade plastics are: simple technology and low production cost. The disadvantage is that the high temperature resistance and aging resistance are relatively weak. PMMA generally has a temperature resistance of no more than 90 ° (heat deformation temperature of 105 °), while PC has a temperature resistance of no more than 120 ° (heat deformation temperature of 135 °). This report reports that the modified plastics used for car lights are polycarbonate and polymethyl methacrylate (PMMA).
