Abstracts

Modified Polyimide (MPI) Film refers to a specialized type of polyimide film that has been chemically modified to enhance its properties and performance for specific applications. Polyimide is a high-performance polymer known for its exceptional thermal stability, electrical insulation properties, and mechanical strength. MPI films are engineered to meet the requirements of demanding applications that standard polyimide films may not fully address. MPI films are commonly used in the electronics industry for applications such as flexible printed circuit boards (FPCBs), tape automated bonding (TAB), and insulating layers in electronic components. The continued growth of the electronics sector, including the development of flexible and miniaturized devices, drives demand for MPI films. Major players in the global MPI film market include DuPont, Kaneka, PI Advanced Materials, Mitsubishi Chemical, UBE INDUSTRIES, etc. These players have advanced production technology and strong R&D capabilities, and occupy a large share of the global MPI film market.

Market drivers

Growing demand in the consumer electronics industry: With the popularity and upgrading of consumer electronics products such as smartphones and tablets, the demand for high-performance materials continues to increase. MPI films are ideal for these products due to their excellent heat resistance, electrical properties, and physical properties.

Development of the aerospace and automotive industries: The aerospace and automotive industries have an urgent need for lightweight, high-strength, and high-temperature resistant materials. MPI films can meet these requirements and are therefore widely used in these fields.

Technological progress and industrial upgrading: With the continuous advancement of materials science and the upgrading of manufacturing technology, the performance of MPI films continues to improve and the application areas continue to expand.

Market development trends

High performance: With the continuous advancement of science and technology and the continuous expansion of application areas, the performance requirements for MPI films are also getting higher

and higher. Enterprises need to continuously improve the performance level of MPI films to meet market demand. **Multifunctionality:** MPI films not only need to have basic heat resistance, electrical properties and physical properties, but also need to have more functional properties, such as flame retardancy, corrosion resistance, radiation resistance, etc. The addition of these functional properties will further enhance the application value of MPI films. **Greening:** With the improvement of environmental awareness and the popularization of the concept of sustainable development, greening will become an important development trend in the MPI film industry. Enterprises need to strengthen the research and development and application of environmental protection technologies to promote green production and sustainable development.

The global Modified Polyimide (MPI) Film market size was estimated at USD 2106.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.30% during the forecast period.
