Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modified Polyphenylene Oxide Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Modified Polyphenylene Oxide Resin is a type of high-performance thermoplastic resin based on polyphenylene ether (PPE) or polyphenylene ether oxide (PPO), which is modified by blending with other polymers (such as polystyrene, polypropylene, polyamide, polycarbonate, etc.), or adding flame retardants, toughening agents, glass fibers, lubricants and other additives. Its goal is to improve the shortcomings of PPE original materials in terms of weather resistance, fluidity, toughness, flame retardancy, etc., so that it can adapt to a wider range of industrial processing and application needs. This type of material has excellent electrical insulation, dimensional stability, heat resistance and flame retardancy, and has broad application prospects in the fields of electrical, electronic, automotive, etc. Modified Polyphenylene Oxide Resin (commonly referred to as modified PPO or PPE) is a high-performance thermoplastic material derived from poly(2,6-dimethyl-1,4-phenylene oxide) through blending with various resins such as polystyrene (PS), polycarbonate (PC), polypropylene (PP), or polyamide (PA), and further customized with flame retardants, stabilizers, and reinforcing agents. This resin offers a unique combination of excellent electrical insulation, dimensional stability, hydrolysis resistance, and thermal endurance, while also being lightweight, halogen-free, and environmentally favorable. It is increasingly used in high-end industries including new energy vehicles, 5G communication devices, smart electronics, EV charging infrastructure, and precision electrical control systems. As demand grows for materials that combine mechanical robustness with sustainability, modified PPO resin is positioned as a strong alternative to traditional engineering plastics such as PC/ABS and PBT. Its value lies not only in

performance but also in its alignment with global trends toward low-toxicity, low-smoke, recyclable, and energy-efficient materials. The market is currently led by key players across Japan, South Korea, China, Europe, and North America, encompassing the entire value chain from monomer synthesis to compound formulation and molded parts. Looking ahead, modified PPO resin is expected to play an increasingly critical role in advanced applications requiring lightweight, flame-retardant, and electrically reliable solutions.

The global Modified Polyphenylene Oxide Resin market size was estimated at USD 1255.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
