Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modified PPS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global modified PPS production reached approximately 226 K tons, with an average global market price of around US\$ 3,018/ton. Modified PPS is a family of engineered PPS compounds in which base PPS resin is compounded with reinforcements and additives (glass- or carbon-fibers, mineral fillers, flame-retardants, impact modifiers, conductive fillers, etc.) to tailor mechanical, thermal, electrical and processing properties for demanding applications. Upstream for modified PPS begins with PPS base resin plus the supply chain for reinforcing fibers, fillers and specialty additives. Downstream, modified PPS is used as injection-molded or extruded compounds for automotive (e-powertrain, under-hood, structural/functional parts), electrical/electronics (connectors, coils, housings), industrial pumps/valves, and speciality consumer/appliance components. Typical new compounding/production lines built by major suppliers are on the order of ~3,000-6,000 metric tonnes per year per line. As a specialty engineering compound, modified PPS products typically have gross margins of 10% to 25%.

The global Modified PPS market size was estimated at USD 682.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
