Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modified Wheat Starch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Modified wheat starch is a form of starch derived from wheat that has undergone physical or chemical modifications to enhance its functionality and characteristics. It is commonly used as a food ingredient to improve texture, stability, and consistency in various processed food products. The modifications can involve treatments like heat, enzymes, acids, or other chemical agents to alter the starch's properties, such as its thickening or gelling capabilities. Modified wheat starch provides food manufacturers with a versatile ingredient that helps improve product quality, shelf life, and overall consumer experience in a wide range of food applications. The growth of the global modified wheat starch market is driven by the rising demand for gluten-free foods, advances in food processing technology, and the expansion of the convenience food market. Consumers are increasingly inclined to choose natural, additive-free foods, promoting the development of clean label products. At the same time, the food processing industry has increased its demand for ingredients with greater stability and longer shelf life, which has led to the continued growth of modified starch applications in baking, dairy products, ready-to-eat foods, and other fields. In addition, environmental trends are driving the research and development of biodegradable starches to meet sustainable development goals, while the improvement of food safety standards has also prompted companies to continue to innovate to meet stricter regulatory requirements. However, the industry still faces challenges. Fluctuations in wheat raw material prices may affect production costs and lead to changes in market prices. At the same time, intensified competition among major companies has compressed profit margins. On the other hand, food additive regulations in different regions of the world

may restrict the use of some modified starches, prompting companies to adjust product formulations to meet different market standards. Despite this, driven by healthy consumption trends and food technology innovations, the modified wheat starch market will continue to maintain steady growth.

The global Modified Wheat Starch market size was estimated at USD 2677.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
