Abstracts

Modular air cooled heat pumps are versatile HVAC systems designed for both heating and cooling applications, consisting of multiple independent outdoor condensing units connected to one or more indoor air handling units, allowing for scalability, redundancy, and zoning to match varying capacity requirements across commercial, industrial, or large residential settings. These systems leverage refrigerant-based heat exchange principles, extracting heat from indoor spaces during cooling mode and reversing the cycle to provide heating by absorbing ambient outdoor heat, even in low temperatures, with modularity enabling incremental expansion, simplified maintenance, and partial operation in case of unit failure.

The global Modular Air Cooled Heat Pump market size was estimated at USD 2680.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
