Report Overview

Modular integrated oxygen machines typically consist of air compressors, filtration systems, molecular sieves, and control systems. The air compressor sucks in ambient air and then removes impurities and moisture through a filtration system. Then, the molecular sieve separates oxygen from other gases in the air, producing a concentrated stream of oxygen for the patient to breathe. One advantage of modular integrated oxygen machines is that they are more convenient than traditional oxygen therapy, which typically requires large oxygen tanks or concentrators. In the long run, it can also be more cost-effective as it eliminates the need for frequent tank refilling or concentrator maintenance.
