Report Overview:

Modular backup power system is an electrical System that provides emergency power to a load when the input power source fails. Continuous Power Supply converts incoming AC to DC through a rectifier, and converts it back with an inverter. Modular Continuous Power Supply differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment.

The Global Modular Backup Power System Market Size was estimated at USD 1422.00 million in 2023 and is projected to reach USD 2294.41 million by 2029, exhibiting a CAGR of 8.30% during the forecast period.
