## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modular Cartesian Robots Systems competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Modular Cartesian Robot Systems are industrial robotic platforms that operate along orthogonal linear axes—typically X, Y, and Z—using a rectilinear coordinate system. These robots are termed "modular" because they are composed of interchangeable and configurable linear actuator modules, allowing users to tailor the robot's stroke lengths, payload capacities, and axis configurations to specific application requirements. Unlike traditional fixed-design robots, modular Cartesian systems offer enhanced flexibility, scalability, and ease of integration into automated production lines. They are commonly used in pick-and-place operations, CNC machining, 3D printing, laboratory automation, and material handling due to their precise linear motion, rigid structure, and customizable working envelope. Modular Cartesian Robot Systems are characterized by configurable parameters that enable customization for a wide range of industrial tasks. Key parameters include the number of axes (typically 2 to 4 linear axes such as X, Y, and Z), stroke length per axis (ranging from 100 mm to over 3000 mm), and repeatability, which is often within  $\pm 0.01$  mm to  $\pm 0.05$  mm. They support payload capacities from a few kilograms to over 100 kg, and linear speeds up to 2 m/s or more. These systems are driven by ball screws, belt drives, rack-and-pinion, or linear motors, and typically use servo or stepper motors with encoder feedback. They are compatible with a variety of controllers, including PLCs and PC-based systems, often with fieldbus protocols like EtherCAT or Modbus. Their modularity allows for easy scaling, different mounting orientations, and integration into diverse environments, with IP ratings that support both cleanroom and harsh industrial settings.

The global Modular Cartesian Robots Systems market size was estimated at USD 2948.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
