The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modular Central Plants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Modular Central Plants production reached approximately 4,211 units, with an average global market price of around US\$ 1,020 per k unit. Modular Central Plants (MCPs) are pre-engineered, pre-fabricated central utility plants built off-site and transported to the project location for installation. They offer a streamlined approach to traditional on-site construction, resulting in faster installation times, reduced costs, and greater flexibility. MCPs can integrate various utilities like HVAC, domestic water, fire protection, and power, often within a single, compact enclosure. The upstream sector mainly includes process equipment, utility equipment, automation and electrical control equipment, and structural materials, etc. The downstream sector is the demand side and end users of modular central factories, mainly hospitals and healthcare institutions, educational institutions, data centers, etc.

The global Modular Central Plants market size was estimated at USD 4296.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
