Abstracts

Modular chillers (heat pumps) are particularly suitable for places such as commercial buildings, office buildings, hotels and large residential areas that require decentralized or centralized air conditioning systems. This type of unit consists of multiple independent modules, each of which is a complete cooling/heating unit that can operate alone or in parallel to meet the needs of spaces of different sizes. Usually air-cooled or water-cooled, heat exchange is achieved using core components such as compressors, evaporators, condensers and expansion valves. They have a high energy efficiency ratio (COP) and can significantly reduce energy consumption and operating costs while reducing greenhouse gas emissions. Modern modular units are also equipped with advanced intelligent control systems that can automatically adjust the operating mode according to ambient temperature and indoor load to optimize performance.

The global Modular Chilled Water Heat Pump Units market size was estimated at USD 5534.82 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
