### Report Overview

Modular constructed wetland is based on the traditional constructed wetland, and the constructed wetland is scaled in equal proportions. The use of the internal matrix filler is still filled according to the most suitable ratio. The plants are adapted to local conditions, and the most suitable species are selected to form a whole unit. Different overall units can be combined into a suitable shape by connecting them in series or in parallel. The rapid assembly of modular constructed wetlands can effectively solve the problem of matrix replacement after clogging. The use of two or more modular constructed wetlands in rotation can achieve sustainable operation of constructed wetland water purification, and replace the blocked modular artificial After substrate cleaning and plant pruning and replacement, the wetland unit can be used repeatedly to meet the requirements of sustainable development.
