Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modular Floating Jetty competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global annual sales of modular floating jetty will reach approximately 35,500 units, with an average price of approximately US\$16,000. This jetty is a flexible berthing and loading and unloading platform composed of standardized modular units. It can be quickly assembled and expanded to meet the diverse needs of ships, floating facilities, offshore engineering equipment, or inland river terminals. It is widely used in port logistics, military docks, yacht docks, and temporary water engineering projects. Its core advantage lies in the modular units' high-strength buoyancy structure, corrosion-resistant surface treatment, and quick-lock docking mechanism, which can significantly reduce the construction cycle and cost of traditional fixed docks while improving the mobility and adaptability of transportation and operations. With the global development of offshore wind power, marine engineering, and the yacht leisure economy, modular floating jetties are gradually replacing traditional fixed facilities and becoming a key growth point in the port and shipping infrastructure market.

The global Modular Floating Jetty market size was estimated at USD 568.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
