Abstracts

A modular floating platform is a platform or ramp supported by pontoons. It is usually joined to the shore with a gangway. The pier is usually held in place by vertical poles referred to as pilings, which are embedded in the seafloor or by anchored cables. Increase in offshore and offshore activities for commercial, recreational, development, and adventure purposes is likely to boost the growth of the floating dock market. Floating docks also provide safety and accessibility, important qualities expected to propel the floating dock industry forward. Moreover, new government defense efforts such as construction of floating docks for submarines and warships are likely to aid the growth of the market. The biggest hurdle expected to restrain the market expansion during the forecast period is government regulations to protect marine ecology. Manufacturers must obtain approval before commencing construction and installation of floating docks to avoid damage to aquatic and marine systems. New projects by various governments have the potential to propel the floating dock market forward during the forecast period.

The global Modular Floating Platforms market size was estimated at USD 550.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
