Report Overview

Logic Analyzer is a device designed for recording and analyzing digital sequences. Available as stand-alone devices, as well as in the form of USB set-top boxes to a PC. The main characteristics of logic analyzers are: the number of channels and the maximum data reading rate (sampling rate). Modular logic analyzers can be rack-mounted or cards that slide into a backplane. You can swap out various modular units to create a unique set of test equipment for your specific needs. Most often, modular analyzers require computer software to control collection and analyze data. Having a separate computer gives you a potentially larger screen and an easier path to upgrade the software. However, you are limited by the connection speeds (for example, USB or Ethernet) between the test equipment and computer.

The global Modular Logic Analyzer market size was estimated at USD 403 million in 2023 and is projected to reach USD 792.27 million by 2032, exhibiting a CAGR of 7.80% during the forecast period.

North America Modular Logic Analyzer market size was estimated at USD 119.52 million in 2023, at a CAGR of 6.69% during the forecast period of 2024 through 2032.
