### Report Overview

Modular Multi-Level Converter (MMC) is a power electronic device commonly used in high-voltage direct current transmission (HVDC) systems. It realizes the control and regulation of high-voltage direct current transmission lines by cascading multiple units. MMC adopts a modular structure. Each module is composed of a capacitor and several switching devices (such as thyristors or IGBTs, etc.), which can achieve multiple output voltages of different levels. This structure enables MMC to have higher voltage, current and power capacity, and can achieve higher voltage levels and lower harmonic content, thereby improving power transmission efficiency and stability.

The global Modular Multilevel Converters (MMC) market size was estimated at USD 2190 million in 2023 and is projected to reach USD 4060.22 million by 2032, exhibiting a CAGR of 7.10% during the forecast period.
