Abstracts

Modular patient monitors are advanced medical devices designed to provide comprehensive and customizable patient monitoring by integrating multiple standalone modules?each dedicated to tracking specific physiological parameters such as ECG, SpO?, blood pressure, temperature, or respiratory rate?into a single, centralized system that allows healthcare facilities to expand or reconfigure monitoring capabilities based on clinical needs, budget constraints, or evolving standards of care. These systems typically feature a main display unit and docking station that can accommodate various plug-in or wireless modules, enabling real-time data acquisition, centralized visualization, alarm management, and often interoperability with electronic health records (EHRs) or hospital networks, making them particularly valuable in dynamic clinical environments like ICUs, emergency departments, and operating rooms where flexibility, scalability, and efficient use of space and resources are critical.

The global Modular Patient Monitors market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
