Abstracts

A modular steering column is a vehicle steering system component designed with interchangeable and customizable parts that allow for flexibility in assembly, adjustment, and integration with various vehicle platforms and driver-assist technologies. Unlike traditional one-piece steering columns, modular variants typically feature standardized interfaces, enabling manufacturers to mix and match components such as shafts, housings, mounting brackets, and electronic control units (ECUs) to meet specific design, safety, and ergonomic requirements. They often incorporate features like telescopic and tilt adjustments, integrated sensors for advanced driver assistance systems (ADAS), vibration dampening, and compatibility with steer-by-wire or electric power steering setups. This modularity supports cost efficiency, simplifies supply chains, accelerates production timelines, and enhances adaptability to evolving automotive trends such as autonomous driving and shared mobility.

The global Modular Steering Column market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
