Abstracts

A modular timer relay is a device that combines the functions of a timer and a relay in one unit. It is typically used in industrial automation applications to control the timing of various processes or equipment. The modular design allows for easy installation and customization, as different modules can be added or removed depending on the specific requirements of the application. Some common features of modular timer relays include adjustable timing settings, multiple timing modes (such as on delay, off delay, and interval timing), and the ability to control multiple outputs simultaneously.
