Report Overview

Modular Uninterrupted Power Supply(UPS) is an electrical System that provides emergency power to a load when the input power source fails. Uninterrupted Power Supply(UPS) converts incoming AC to DC through a rectifier, and converts it back with an inverter. Modular Uninterrupted Power Supply(UPS)differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored inbatteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short(only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment.
