Abstracts

Metal-organic frameworks (MOFs) and covalent organic frameworks (COFs) represent a class of highly porous, crystalline materials characterized by their tunable structures, high surface areas, and modular design, with MOFs consisting of metal ions or clusters coordinated to organic ligands to form one-, two-, or three-dimensional structures, while COFs are composed entirely of light elements (such as H, B, C, N, O) linked by strong covalent bonds, offering exceptional chemical stability and design flexibility for applications ranging from gas storage and separation to catalysis, sensing, and drug delivery. The global market for MOFs and COFs is experiencing robust growth, driven by increasing demand in sectors such as energy storage, where these materials are used for hydrogen and methane storage, environmental remediation for carbon capture and pollutant removal, and healthcare for controlled drug release and diagnostics, with significant investments in R&D from both academic institutions and industrial players accelerating material innovation and commercialization. Key market trends include the development of more stable and cost-effective synthesis methods, expansion into emerging applications like water harvesting and batteries, and growing partnerships between material suppliers and end-use industries to scale production and enhance material performance, although challenges related to high production costs, scalability, and long-term stability under operational conditions remain barriers to widespread adoption. Geographically, North America and Europe lead in terms of research output and early adoption, particularly in environmental and energy applications, while the Asia-Pacific region is rapidly emerging as a major market due to strong governmental support, increasing industrial activities, and rising investments in sustainable technologies, with companies like BASF, MOF Technologies, and Strem Chemicals dominating the supply landscape, while startups and academic spin-offs continue to introduce novel materials and applications, positioning MOFs and COFs as pivotal advanced materials for future technological advancements.

The global Mofs And Cofs Materials market size was estimated at USD 350.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
