The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Moissanite Crystal competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Moissanite crystal is an artificial gem material with silicon carbide (SiC) as the main component. It is synthesized through high temperature and high pressure or physical vapor transport (PVT) and other processes. It has a high refractive index and strong light scattering performance close to that of natural diamonds. It has high hardness, strong wear resistance, good thermal stability, and an appearance that is extremely similar to diamond. It is often used in jewelry manufacturing and decorative applications. At the same time, due to its excellent thermal conductivity and electrical properties, it has broad potential in high-tech fields such as electronic devices, optical windows and laser devices.

The global Moissanite Crystal market size was estimated at USD 73.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
