Report Overview

Moisturizing Cream a cosmetic preparation, as a cream or lotion, used to restore moisture to the skin, especially of the face and neck.

Moisturizers don't actually add moisture. Instead, they attract and trap existing water in the skin. A good moisturizer contains humectants, ceramides and/or emollients that lock water in the outer layer of the skin, giving any damaged cells a chance to repair. Skin type and the degree of dryness will determine what type of hydrator you will best benefit from.
