Abstracts

Mold Rapid Prototyping refers to the process of rapidly designing and manufacturing mold prototypes or small-batch functional molds in a very short time using advanced technologies such as additive manufacturing, high-speed milling, and rapid casting. It overcomes the limitations of traditional mold manufacturing, which is characterized by long cycles and high costs, by directly driving physical processing through digital models, achieving rapid transformation from design to physical molds. This technology is particularly suitable for prototyping, small-batch production, and the manufacturing of complex mold structures during the product development stage. It can significantly shorten time-to-market, reduce development risks, and is one of the key supporting technologies for modern agile manufacturing and personalized production. The global development of Mold Rapid Prototyping technology exhibits significant regional characteristics. Europe and the United States, with their strong R&D foundations, hold a leading position in high-end additive manufacturing (such as direct metal 3D printing), new materials, and innovative software, particularly focusing on high-end customized applications in aerospace and medical fields. Japan and Germany excel at deeply integrating rapid prototyping technology with precision machining, achieving highly stable and efficient mold manufacturing systems that serve their core industries such as automotive and precision instruments. China, representing the manufacturing hubs of Asia, has extremely strong market demand and is rapidly driving the industrialization and cost optimization of the technology through large-scale applications and supply chain integration, becoming the fastest-growing and most widely used market for this technology, forming a complete ecosystem from R&D to practical application.

The global Mold Rapid Prototyping market size was estimated at USD 214.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
