## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molded Case PV Grid-Connected Circuit Breaker competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global molded case PV grid-connected circuit breakers production reached 5.08 million units, with an average global market price of US\$103 per unit. Molded-case photovoltaic grid-connected circuit breakers (MCCBs) are electrical protection devices designed specifically for photovoltaic power generation systems. They utilize a plastic insulating casing to house their internal components. They provide isolation, overload, short-circuit, and DC high-voltage disconnection protection, ensuring safe and reliable grid connection and operation of the photovoltaic system. In the event of a system fault, they rapidly disconnect the circuit to protect critical equipment. They are used in multiple stages of photovoltaic power generation systems, including combiner boxes, DC switchgear, frequency converters, and box-type substations. From a supply chain perspective, the upstream supply chain includes raw materials and core components such as metal materials (such as copper and silver contacts), plastics, electromagnetic coils, and electronic components (chips and sensors). The downstream supply chain includes photovoltaic module manufacturers, inverter manufacturers, EPC contractors, distribution cabinet integrators, power plant operation and maintenance companies, and end users. The average gross profit margin ranges from 20% to 35%, with high-end models offering margins of 35% to 45%.

The global Molded Case PV Grid-Connected Circuit Breaker market size was estimated at USD 528.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
