## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molded Coolant Hose competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A molded coolant hose is a pre-shaped, reinforced rubber or thermoplastic hose designed to transport engine coolant between key components such as the radiator, water pump, thermostat housing, and heater core. Unlike straight or universal hoses, molded coolant hoses are specifically formed to match the complex routing paths within an engine compartment. This custom shape ensures a precise fit, prevents kinking or collapsing under pressure, and allows efficient coolant flow even in tight or irregular spaces. The hoses are typically constructed from EPDM (ethylene propylene diene monomer) rubber or advanced multi-layer composites that resist heat, ozone, and chemical degradation. In 2024, global molded coolant hose production reached approximately 127.59 million meters, with an average global market price of around US\$ 17.36 per unit. And global molded coolant hose production capacity reached approximately 183 million meters. The average gross margin in this industry reached 19.58%.

The global Molded Coolant Hose market size was estimated at USD 2215.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
