Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molded Interconnect Substrate Technology competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Molded Interconnect Substrate Technology (MIS) is a novel substrate solution that is ideal for mobile industry. It encompasses a wide range of solutions for the complex needs of IC package for mobile applications. With its embedded copper trace technology, it enable a finer line and space that is needed for high I/O count with smaller form factor. It also provides a robust Flip Chip assembly process. Another important feature of MIS substrate is copper filled-via and filled-pad technologies, which is significantly important for high frequency requirements, and improve thermal dissipation. Currently, there are currently only three companies in the world that manufacture MIS substrates, China Taiwanese PPT, Chineses MiSpak Technology and Malaysian QDOS. PPT now can supply 1 layer, 2 layer, 3 layer, 4 layer and 6 layer MIS substrates. MiSpak Technology supplies 1 layer and 2 layer MIS substrates. QDOS supplies 1 layer, 2 layer and 3 layer MIS substrates. The growth potential of MIS products in the substrate application market will come from network communication products such as servers and data centers, automotive electronic control equipment driven by electric vehicles and automotive intelligence, as well as 5G, AIoT and other applications. With the launch of these related products, the requirements for substrates used in semiconductor packaging will also increase significantly, requiring a high degree of design flexibility, improved performance and high reliability. In terms of advanced lead frame products, MIS manufacturers (PPT, MiSpak and QDOS) mainly supply products that are not limited to single-layer boards. PPT can also provide multi-layer board windable lead frame products for multi-chip packaging, which are products that are difficult for traditional lead frame suppliers to provide. Currently the MIS

substrates are mainly used in power/PMIC/analog, automotive electronics, RF/5G, Optical Image Stabilization (OIS), fingerprint recognition, third generation semiconductor, and LED, etc. Most of MIS substrates are used in power segment. For third generation semiconductor, MIS substrates are mainly used in GaN devices.

The global Molded Interconnect Substrate Technology market size was estimated at USD 98.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.20% during the forecast period.
