## Abstracts

Molded reed switch is an electromagnetic switch component that uses a plastic or epoxy resin mold to encapsulate the traditional glass-encapsulated reed switch. By providing a molded shell that is impact-resistant, moisture-proof and mechanically supported on the reed leads and contacts, it not only retains the high sensitivity and low leakage current characteristics of the reed switch, but also significantly improves the vibration resistance and environmental stress resistance. It is widely used in consumer electronics, automotive safety sensing, industrial automation and building security.

The global Molded Reed Switch market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
