## Abstracts

Molded Transformers are transformers that encapsulate the windings and core in epoxy resin or other insulating materials. This design gives the transformer higher mechanical strength, better insulation performance and longer service life. The encapsulation of epoxy resin or other insulating materials gives the transformer high mechanical strength and can withstand shock and vibration during transportation and installation. The encapsulation material has high dielectric strength, which can effectively prevent short circuits and leakage, and improve the operating safety of the transformer. Molded transformers are widely used in power systems, industrial equipment and special environments.

The global Molded Transformers market size was estimated at USD 4853.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
