## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molded Trays competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Molded pallets are environmentally friendly pallets made from plant fiber materials such as wood fiber, straw, bagasse, and recycled pulp. They are crushed, mixed, and hot-pressed under high temperature and pressure. Their production process requires no fumigation and does not damage forest resources. They offer advantages such as light weight, high strength, moisture resistance, and biodegradability or recyclability. They are widely used in logistics, transportation, warehousing, packaging, and export trade, particularly in the environmentally sensitive food, pharmaceutical, and international freight sectors. They offer a sustainable, green alternative to traditional wooden and plastic pallets. In 2024, the global production of molded pallets will reach 521.45 million pieces, with an average selling price of US\$9,930 per thousand pieces.

The global Molded Trays market size was estimated at USD 3193.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
