Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molding Power Inductors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global molded power inductors sales reached approximately 20,240 million units, with an average global market price of around US\$ 209.3 k unit. Molded power inductors are high-performance inductors formed from soft magnetic metal powders (such as sendust and iron-nickel) and encapsulated with materials such as epoxy resin. They are characterized by high inductance, low leakage inductance, high efficiency, and excellent temperature stability. Their compact size, suitability for high-density mounting, excellent vibration resistance, and high saturation current capability make them particularly suitable for high-frequency, high-current applications. They are commonly used in computer CPU voltage regulators, power supplies, DC-DC converters, and other electronic devices requiring high-performance, miniaturized inductors. Global Molding Power Inductors include Cyntec, TDK, YAGEO Group, Vishay and Shenzhen Microgate Technology, etc. Global top five manufacturers hold a share around 56%. The largest market is Asia-Pacific, has a share around 70%, followed by North America and Europe, with around 15% and 10% market share respectively. In terms of product, Small Size is the largest segment, with a share over 70%. And in terms of application, the largest application is Consumer Electronics, has a share over 80%, followed by Automotive Electronics, AI Servers & Traditional Servers, Industrial Equipment, RF & Telecommunications and Medical Devices, etc. With the rapid adoption of 5G communications, AIoT, and wearable devices, demand for small-sized, high-performance inductors is strong, driving product development towards high frequency and low loss. In the automotive electronics sector, high-power scenarios such as electric drive systems, onboard chargers, and ADAS in new energy vehicles are

accelerating the expansion of high-current inductor applications. Furthermore, the widespread use of third-generation power semiconductors (SiC and GaN) is placing higher efficiency and heat resistance requirements on inductors, driving continuous upgrades in monolithic molding processes and magnetic powder materials.

The global Molding Power Inductors market size was estimated at USD 4236.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.80% during the forecast period.
