Report Overview

Clostridium difficile is a disease caused by bacteria. Symptoms of the disease includes diarrhea, nausea, colon inflammation, and others. Causal organism for infectious diseases could be bacteria, viruses, parasites or fungi and can be spread, directly or indirectly, from one person to another. Molecular diagnostic is showing promise in the identification of microorganisms as well as evaluation of virulence factors and antibiotic resistance determinants. Molecular infectious diseases diagnosis is moving towards high-throughput, simple, array-type technologies that provide a wealth of data on types of organisms present in a sample and the virulence factors/resistance determinants that influence the severity of disease. Molecular diagnostic helping infectious diseases to be more accurately and effectively treated.
