The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molecular Interaction Instrument competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of molecular interaction analyzers (MIDs) reached 665 units, with an average selling price of US\$395,000 per unit. The annual production capacity of a single MID production line is approximately 60 units, with a gross profit margin of approximately 30.2%. A MID is a scientific instrument used to study and measure interactions between molecules. It is commonly used in life sciences, materials science, and chemistry to help researchers understand how molecules interact, bind, and influence each other's properties. Molecular interactions can be of various types, including protein-protein, protein-nucleic acid, and ligand-target interactions. Upstream raw materials for MIDs include high-end microscopy systems, microfluidic chips, and specialized algorithm software. The midstream consists of MID manufacturers, while the downstream primarily comprises hospitals, research institutions, and pharmaceutical companies.

The global Molecular Interaction Instrument market size was estimated at USD 263.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
