The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molecular Sieve PVC Composite Stabilizer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Molecular sieve PVC composite stabilizer is a new type of environmentally friendly heat stabilizer with molecular sieve as the functional carrier. It is usually compounded with calcium, zinc, organic acid salt, rare earth or auxiliary stabilizer. It has the functions of absorbing HCl, capturing free ions, and slowly releasing thermal decomposition products. The introduction of molecular sieve structure not only improves the thermal stability of the heat stabilizer, but also prolongs the thermal life of the PVC processing process, reduces initial coloring, and improves the anti-aging and mechanical properties of the product. This product does not contain harmful heavy metals such as lead and cadmium, complies with environmental regulations such as RoHS and REACH, and is an ideal substitute for traditional lead salt stabilizers.

The global Molecular Sieve PVC Composite Stabilizer market size was estimated at USD 1020.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
