## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Molybdenum Washer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Molybdenum washers are sealing elements made of high-purity molybdenum or molybdenum alloys, mainly used to form uniform pressure distribution and sealing between fasteners and connected surfaces. Due to the extremely high melting point, good high-temperature strength, corrosion resistance and oxidation resistance of molybdenum, molybdenum washers can maintain stable performance in extreme temperatures, pressures and corrosive environments. This makes it an irreplaceable key component in situations where it needs to withstand high temperatures, mechanical stresses and harsh chemical media for a long time.

The global Molybdenum Washer market size was estimated at USD 304.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Molybdenum Washer market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
