Abstracts

Monkeypox virus vaccines are biological preparations designed to induce immunity against the monkeypox virus, primarily through the administration of live attenuated or non-replicating viral vectors that stimulate an immune response without causing disease. These vaccines are critical for both pre-exposure prophylaxis in high-risk populations, such as healthcare workers and laboratory personnel, and for post-exposure outbreak control, as evidenced during the 2022 global mpox outbreak. The market is characterized by a limited number of approved vaccines, with Bavarian Nordic's JYNNEOS (also known as Imvamune or Imvanex) being the primary product authorized in multiple regions, including the U.S. and Europe, while older smallpox vaccines like ACAM2000 are used off-label due to cross-protection but carry higher safety risks. Demand is driven by public health policies, outbreak frequency, and growing awareness, though market size remains niche compared to broader vaccine segments, with production scalability, regulatory pathways, and global equity in access shaping its commercial and public health trajectory.

The global Monkeypox Virus Vaccine market size was estimated at USD 580.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
