Report Overview

Mono n-butylamine (NBA) is a primary aliphatic amine with the chemical formula $C_4H_{11}N$, characterized by its strong ammonia-like odor and high solubility in water and organic solvents. It serves as a key intermediate in the synthesis of pharmaceuticals, agrochemicals, rubber chemicals, and dyes, while also functioning as a corrosion inhibitor, flotation agent, and surfactant in industrial applications.

The global market for NBA is driven by increasing demand from the agrochemical sector, particularly for herbicides and pesticides, as well as its use in pharmaceutical manufacturing for drug formulations. Growth is further supported by expanding applications in water treatment and the rubber industry, though regulatory constraints on chemical usage and volatility in raw material prices pose challenges. The Asia-Pacific region dominates production and consumption due to robust industrial activity, while North America and Europe maintain steady demand for specialty chemical applications. Emerging economies are expected to drive future growth, with manufacturers focusing on sustainable production methods to meet tightening environmental standards.
