Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monoalkyl Halide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global monoalkyl halide production reached approximately 2,660 kilotons, with an average global market price of around US\$ 900 per ton. A monoalkyl halide is an organic compound in which a single halogen atom (such as fluorine, chlorine, bromine, or iodine) is bonded to a carbon atom of an alkyl group, with only one halogen substituent present in the molecule. They are commonly classified as primary, secondary, or tertiary alkyl halides depending on whether the halogen-bearing carbon is attached to one, two, or three other carbon atoms. Monoalkyl halides are important intermediates in organic synthesis, as they readily undergo substitution and elimination reactions, making them useful for preparing alcohols, amines, alkenes, and many other functionalized compounds. The key market drivers for Monoalkyl Halides are primarily linked to their role as versatile intermediates in the chemical, pharmaceutical, and agrochemical industries. Demand is fueled by their extensive use in the synthesis of active pharmaceutical ingredients (APIs), specialty chemicals, and crop protection products such as herbicides and pesticides. Growth in the polymer and plastics industry also drives consumption, since monoalkyl halides serve as raw materials for producing resins, elastomers, and coatings. Additionally, the rising need for surfactants, solvents, and flame retardants in industrial and consumer applications contributes to market expansion. Regional market growth is further supported by emerging economies with expanding chemical manufacturing bases, stricter regulatory standards that encourage advanced intermediates, and ongoing research in green chemistry aimed at producing halogenated compounds more sustainably.

The global Monoalkyl Halide market size was estimated at USD 2395.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
