Report Overview

The ditch body and the cover plate of the Monoblock(integrated) drainage ditch are linked together. A number of drainage holes are formed on the cover plate. The cover plate covers the upper end of the opening side of the ditch body. The cover plate and the ditch body are connected through dry glue to form an integrated one. Structure, there is no cover shift or springboard phenomenon when used after installation. The integrated drainage ditch uses resin concrete to make the cover plate and ditch body. The pressure level of the product of the same volume is significantly higher than that of ordinary cement products. The product is impermeable. It is resistant to freezing and can effectively prevent erosion by various chemicals. It can also be used for a long time under conditions with complex sewage composition. The integrated drainage ditch has a very good load capacity and is generally suitable for places with high load-bearing levels.
