Abstracts

Chloroacetic acid, also called Chloroacetic acid (MCA), is a bi-functional molecule-structured acid. At room temperature, pure MCA is a colorless, deliquescent crystalline mass. It is very soluble in water, freely soluble in methanol, ethanol, isopropanol, diethyl ether and acetone. It is extensively used as a chemical intermediate for the production of numerous industrially and commercially important chemicals, including glycine, CMC, TGA, and cyanoacetic acid. It is also used in the production of betaine-type surfactants, synthetic caffeine, and vitamins, and the production of 2, 4-D and methanoates for using in herbicides. MCA is commercially produced through the chlorination of acetic acid during the production of acetic anhydride as a catalyst. MCA is marketed in various forms: as a solid (powder or flakes), in molten form (kept at a temperature > 80°C) or as 80% dilution in water. For these forms of packaging, exposure estimates are made.

The global Monochloroacetic Acid market size was estimated at USD 690.48 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
