Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monochrome Laser Multifunction Printer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of monochrome laser single-function printers reached 17.1035 million units, with an average selling price of US\$127 per unit. The annual production capacity of a single-line monochrome laser single-function printer is approximately 50,000 units, with a gross profit margin of approximately 32.5%. A monochrome laser single-function printer is a laser printer capable only of printing black and white text/graphics, typically lacking multi-function (MFP) features such as scanning, copying, and faxing. It uses laser imaging technology to form a latent image on a photosensitive drum, which is then transferred to paper through a developer and toner, and finally fixed through a fusing process to form the printed image. Compared to color laser printers and MFPs, monochrome laser single-function printers are generally cheaper, have higher print speeds, lower unit costs, occupy less space, and are easier to operate. The upstream raw materials for monochrome laser MFPs include basic materials and components. Laser and optical components include laser diodes/laser modules, optical lenses, reflectors, and optical path adjustment elements. Body and structural materials include metal casings, aluminum extrusions, chassis components, shock absorbers, bolts, and seals. Imaging and sensing components: Photoelectric sensors, cameras, and CMOS/CCD components for alignment and quality inspection. Midstream includes manufacturers of black and white laser multifunction printers, while downstream includes home and commercial printers.

The global Monochrome Laser Multifunction Printer market size was estimated at USD 2572.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 3.40% during the forecast period.
