Abstracts

Monoclinic zirconia powder is a crystalline form of zirconium dioxide (ZrO_2) characterized by its stable structure at room temperature and ambient pressure, distinguished from other polymorphs such as tetragonal and cubic zirconia by its unique lattice parameters and lower symmetry. This material exhibits high thermal stability, chemical inertness, and mechanical strength, making it particularly suitable for applications such as ceramic pigments, refractory coatings, abrasive materials, and as a raw component in advanced ceramics and composites where phase stability is critical. Its properties, including a high melting point (approximately 2,700°C) and resistance to corrosion, further enhance its utility in harsh environments, such as thermal barrier coatings and wear-resistant parts.

The global Monoclinic Zirconia Powder market size was estimated at USD 75.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
