Abstracts

A monocrystal texturing additive is a chemical substance added during the texturing process of monocrystalline silicon. It precisely regulates the chemical reactions on the silicon wafer surface. By lowering the activation energy of reactions, it promotes the formation of a uniform, fine - structured textured surface. This enhances light absorption, reduces light reflection, and improves the photoelectric conversion efficiency of monocrystalline silicon solar cells, playing a crucial role in the solar photovoltaic industry.

The global Monocrystal Texturing Additive market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
