## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monocular Bird Watching Telescopes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of monocular bird watching telescopes reached approximately 686,000 units, with a typical retail price of around USD 1,320 per unit and a typical gross profit margin of approximately 25%-40% for manufacturers and distributors. Monocular bird watching telescopes are a type of high-magnification portable optical telescope used for birdwatching, wildlife observation, long-distance observation, and near-astronomical observation. They are typically used with a tripod for stable field of view. Common specifications include magnification zoom of 15-60x (e.g., 20-60x), objective lens diameter of 50-86 mm, and weight ranging from approximately 600 g (small-aperture portable models) to 2.5 kg (large-aperture high-end models). Upstream components include high-refractive-index optical glass, low-dispersion lenses (ED/HD glass), multi-layer coating materials, sealing and nitrogen-filling processes, composite or magnesium alloy housings and molding dies, assembly and quality control equipment. Downstream components include outdoor retailers, e-commerce channels, professional birdwatching/photography communities, military and police procurement (in small quantities), and export distributors. Athlon has an annual production capacity of approximately 20,000 units per year. Rising interest in wildlife photography and bird watching, which is widely popular due to its remuneration, will drive the market growth. One of the major drivers of market growth is the rise in interest in wildlife photography and bird watching. The efforts of wildlife lovers have been recognized by various governmental and non-governmental groups around the world. In addition to technical expertise and time management skills, upgraded cameras and supporting equipment, such as scopes, are also required. In addition, the manufacturer

has introduced several innovations in terms of scope devices and adapters for integrating with mobile phones. Wildlife photography and the study of animal and bird behavior has become a popular hobby in many countries around the world. In addition to technical expertise and time management skills, these photographers and hobbyists need advanced cameras and supporting equipment, such as spotting scopes. Over the past few years, many companies have launched advanced monoculars. For example, Bushnell sells 4x 50mm Night Watch night vision scopes for wildlife photography. At night, this spotting telescope has a viewing range of 700 feet. Likewise, the growing demand for tilting body sighting glasses in bird watching has dramatically changed the market dynamics.

The global Monocular Bird Watching Telescopes market size was estimated at USD 905.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
