Abstracts

Monoethanolamine (MEA) is an organic compound belonging to the ethanolamine class, featuring both an amine and a hydroxyl functional group, which imparts it with versatile chemical properties including alkalinity, reactivity with acids and carbon dioxide, and solubility in water and alcohols. It is industrially synthesized through the reaction of ethylene oxide with ammonia, yielding a mixture of ethanolamines from which MEA is separated and purified. Its applications are diverse, spanning use as a chemical intermediate in the production of surfactants, emulsifiers, and detergents; as a key component in gas treatment processes for carbon dioxide and hydrogen sulfide removal; as a corrosion inhibitor in metalworking fluids; and as a pH adjuster and scrubbing agent across sectors such as agrochemicals, personal care, textiles, and construction. The market for MEA is driven by demand in natural gas processing, cleaning products, and construction chemicals, with growth influenced by industrial expansion, environmental regulations promoting cleaner fuels, and innovations in gas capture technologies.

The global Monoethanolamine (Mea) market size was estimated at USD 685.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
