Abstracts

Monoethyl adipate (MEA) is a clear, colorless liquid ester formed through the esterification of adipic acid with ethanol, primarily functioning as a solvent, plasticizer, and intermediate in chemical synthesis. It is valued for its low volatility, high boiling point, and excellent solvency properties, making it particularly useful in applications such as coatings, adhesives, inks, and personal care products, where it enhances flexibility, durability, and performance without contributing significantly to odor or environmental emissions. As a derivative of adipic acid, its production and demand are closely linked to the broader adipate ester market and end-use industries like polymers, textiles, and specialty chemicals.
